

# Thames Valley Y-Site Intravenous Drugs Compatibility Chart (September 2015)

Prepared by the Thames Valley Critical Care Network Pharmacists Group\*

**Note:**

This table can be used for Y-site compatibility at the usual manufacturers concentrations. You should also ensure that the drugs checked are compatible in terms of carrier fluid

This table gives information for **two drug combinations only**. It can not be extrapolated to three drug combinations

Use of higher than the manufacturers recommended concentrations (eg in fluid restriction) may affect compatibility

The majority of sources cited define compatibility by physical compatibility rather than chemical compatibility

This table is a guide only. Full information can be obtained from your pharmacy department
